“The decision to join the collaborative evaluation undertaken by **International Genetic Solutions (IGS)** will bring a number of advantages to commercial cow-calf producers and other participants in the beef value chain.”

— Dr. Bob Weaber, Kansas State University
Cow-calf Extension Specialist

“**IGS** represents an unprecedented collaboration between multiple beef breed associations with a common goal: Improving National Cattle Evaluation and providing commercial cattle producers with the tools needed to make informed selection decisions.”

— Matt Spangler, University of Nebraska
Beef Genetics Specialist

“With the advent of multi-breed evaluations and improvements in national genetic evaluations, the rate of progress is unprecedented . . . The greatest impact of these changes will be felt by the commercial industry.”

— Troy Marshall,
Marshall Cattle Company

“This concept of data sharing or data comingling facilitates efficient bull selection and adds a simpler tool to the commercial producer’s toolbox for bull selection.”

— Kris Ringwall,
North Dakota State University

Today, **IGS** is a collaboration of 12 progressive breed associations that have put the needs of the commercial cattle producer first by creating an unprecedented multi-breed genetic evaluation. With over 17,000,000 total animals and 340,000+ new animals added annually, **IGS** has the largest beef genetic evaluation system in the world — a system that provides beef producers with the most powerful and user-friendly selection tools that have ever existed.

- ◆ Largest Beef Genetic Evaluation
- ◆ ALL Breeds and Breed Compositions
- ◆ Full Suite of EPDs and Indexes
- ◆ Direct EPD Comparisons
- ◆ Full Range of DNA Enhancement Options
- ◆ Commercial Herd Access
- ◆ Producer Friendly Cost Structures
- ◆ Feeder Profit Calculator

Proven Genetic Evaluation System — With roots tracing back to Cornell University's renown geneticists, Dick Quaas and John Pollak, and over three decades of continuous improvements, the genetic evaluation software employed by **IGS** is one of the world's most trusted and respected.

Unrivaled Database — Fueled by data from 12 progressive breed associations 17 million total animal records with over 340,000 new animals added annually. Not only is the **IGS** database unmatched in size, it's also unsurpassed in quality, as the vast majority of new records are derived from **IGS** partners who implement whole-herd reporting.

Simplified Selection Tools — While the process of calculating EPDs on the world's largest multi-breed database is complex, the **IGS** partners have taken a revolutionary step by presenting the resulting EPDs on a common base; which allows users to directly compare the genetic merit of animals regardless of breed composition.

Commercial EPDs — Commercial producers now have access to the tools once reserved for seedstock operations. EPDs, Indexes, and DNA enhancement are now available for commercial cowherds. Producers can now make more knowledgeable selection decisions regarding their female base and select bulls that best fit their herd and marketing plans. Also, this genetic information can be incorporated into a program that values and differentiates the profitability of feeder cattle — such as the IGS Feeder Profit Calculator!

IGS Feeder Profit Calculator — Historically, the primary limitation of valuing feeder calves has been accurately gauging the profit potential in the largest genetic group within the industry — the crossbred calf. Therefore, a feeder calf profit calculator must have multi-breed capabilities. It must be able to incorporate genetic value with management related information. Fortunately, **IGS** provides the ideal platform to generate unparalleled information on crossbred feeder calves. **IGS** is uniquely suited to provide the industry's benchmark in gauging feeder calf value. The **IGS** Feeder Profit Calculator empowers producers to market with confidence and allows feeders to maximize their purchasing dollars.

IGS Science Team
